In This Issue:

- * Inventories
- * Pig Crops
- * Intentions
- * Operations
- * Inventory Values
- * Revisions for 1989 and 1990

INVENTORY UP 1 PERCENT: U.S. inventory of all hogs and pigs is estimated at 54.6 million head on December 1, 1990, according to the Agricultural Statistics Board. This is 1 percent above December 1, 1989, but 2 percent below the September 1, 1990, inventory which was revised downward by 360 thousand head.

- Breeding hog inventory, at 6.87 million, is virtually unchanged from last year but 3 percent below two years ago.
- Market hog inventory, at 47.7 million, is 2 percent above a year ago but 1 percent below two years ago.

The 10 **QUARTERLY STATES**, with 43.0 million head on December 1, 1990, are up 2 percent from a year earlier but slightly below December 1, 1988. These 10 States account for approximately 79 percent of the total U.S. hog and pig inventory.

1990 PIG CROP: The U.S. pig crop for 1990 totaled 90.1 million head, 2 percent below 1989 and 3 percent below the 1988 pig crop.

- December 1989-May 1990 pig crop, estimated at 45.3 million head, is 4 percent below a year earlier and 3 percent below the comparable period in 1988.
- June-November 1990 pig crop, estimated at 44.8 million head, is slightly below last year and 3 percent below the June-November 1988 pig crop.

A total of 5.70 million sows farrowed during June-November 1990, 1 percent below a year earlier and 6 percent below the June-November 1988 period. The litter size during this period averaged a record high 7.86, compared to the previous record of 7.76 in 1989 and 7.62 in 1988.

In the 10 QUARTERLY STATES, the June-August 1990 pig crop totaled 17.7 million head, 2 percent below the same quarter a year earlier. For the September-November period, the pig crop of 17.3 million head was 2 percent above the same period in 1989.

FARROWING INTENTIONS: U.S. hog producers intend to have 5.71 million sows farrow during the December 1990-May 1991 period, 1 percent below the actual farrowings during the same period a year ago.

Intentions in the 10 QUARTERLY STATES totaled 2.05 million sows to farrow during December 1990-February 1991. This is up 1 percent from actual farrowings during the same period a year earlier. The March-May 1991 intentions, at 2.40 million, are 2 percent below the March-May 1990 quarter.

REVISIONS: This report includes revisions to inventory estimates for December 1, 1989, and June 1 and September 1, 1990. Farrowings and pig crop estimates for all quarters prior to September-November 1990 also reflect some adjustments.

RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from a sample of producers across the U.S. using probability surveys. These surveys included information from about 74,000 operators sampled from a list of agricultural producers plus additional information from operators of about 7,600 small land area tracts. Information was collected during the first half of December by mail, telephone and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about 1.9 percent at the U.S. level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within 3.8 percent of the value developed by all possible samples selected from the same population and surveyed using the same procedures. The relative standard errors for the major groupings of breeding and market hogs are 2.2 percent and 1.9 percent, respectively. The relative standard errors for the market hog weight groups range from 2.2 to 2.4 percent.

Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

AGRICULTURAL STATISTICS BOARD:

Rich Allen, Chairperson,
Michael A. Hunst, Secretary,

A P P R O V E D:

SECRETARY OF AGRICULTURE

J. Donald Allen,
Robert W. Cole,
Doyle R. Fuchs,
Gregory R. Kimmet,

William L. Pratt,
Steve J. Pscodna,
Gerardo A. Ramirez,
Frederic A. Vogel.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to changes in economic and environmental conditions. For the 10-State December-February second intentions, these differences have exceeded 4 percent in three of the last ten quarterly December-February pig crops. For March-May first intentions, these differences have exceeded 6 percent in four of the last ten quarterly March-May pig crops.

In setting the inventory estimates, the Agricultural Statistics Board constructed a U.S. balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. The balance sheet provided an additional check on survey inventory estimates.
